

FINAL DELIVERABLE PROJECT

DOCUMENTATION

Date	16 November 2022
Team ID	PNT2022TMID38060
Project Name	Virtual Eye-Lifeguard for Swimming Pools to Detect the Active Drowning

CHAPTER-1

1.INTRODUCTION

Recently, there has been growing interest around the topic of drowning detection systems (DDS) in the sport and leisure industry both across the UK and globally. Advancements in technology, coupled with the importance of pool safety, has led to its growing prominence, with mention of DDS now in documents such as HSG179 - the latest UK standards document for health and safety in swimming pools (Health and Safety Executive, 2018). However, the topic is a debated area for various reasons explored in this review.

Whilst there are plenty of academic articles dedicated to the technology and design behind these products in the fields of biometrics, computer science and electronic engineering, there is limited academic research investigating their application to real-world scenarios. Furthermore, there is uncertainty around their use alongside traditional lifeguarding; whether international testing standards (ISO standards) are robust enough; and general risks affecting the effectiveness of these products. This includes factors such as water clarity, high pool occupancy, lighting, glare and attractions such as water slides and wave machines. These concerns alongside the lack of research and high installation costs have resulted in a reluctance by some operators to incorporate DDS into their pools. This signifies the importance of independent research into DDS. intends to support the move towards the shared goal of improved pool safety.

This piece will begin with an overview of the different definitions of DDS, followed by an explanation of the aims and methodology of this review. It will then discuss what the current DDS standards are alongside legislation and guidance available around DDS, and provide a summary of the shared responsibilities towards the effective operation of DDS. Following this, the literature review will examine the co-existence between DDS and traditional lifeguarding, provide an analysis of its impact so far, and conclude with recommendations on the direction of future DDS research.

1.1 Project Overview

1.2 Purpose

- >> Establish and outline what is known on Drowning Detection Systems.
- >> Evaluate the current literature on Drowning Detection Systems, including their use in indoor pool environments along with interaction with traditional lifeguarding.
- >> Better understand where DDS are positioned in the health and safety landscape of indoor swimming pools.

The value that can be generated from these aims stem from the recognition that currently, there are no published documents drawing together all the current DDS research. The literature review aims to contribute as independent research in this field and hopes to signpost the potential future direction of DDS research.

CHAPTER-2

2. LITERATURE SURVEY

Of the differing definitions of DDS, most outline three defining elements:

- 1) surveillance,
- 2) detection of a pool user in difficulty, and
- 3) raising an alarm

For example, ISO_20380 (the document published by the International Organisation for Standardization (2017) outlining the international safety requirements and test standards for DDS) defines the technology as an ‘automated system including means for digitizing series of images of people in the pool basin, means for comparing and analysing digitized images and decision means for setting off and sending an alarm to trained staff when a detection occurs’. In comparison, there are broader definitions that are inclusive of other technologies that focus on the surveillance aspect, for example, ‘DDS is used to describe various electronic systems that are designed to assist with the surveillance of swimmers within the water of a swimming pool’ (Sport England, 2011). This definition would include CCTV that helps give lifeguards an underwater view but does not have the capacity to detect a pool user in difficulty or raise an alarm. For this to be effective, staff would have to make sure the CCTV is being monitored at all times, making the staff experience with this very different to the experience of using a DDS falling under the first definition. It is important to distinguish what exactly constitutes a DDS as there are different areas of responsibility required from different actors involved in the effective operation of DDS, which will be examined in chapter 4. For this literature review, research has focused on the definition used by the ISO and other sources that incorporate all three elements of surveillance, detection and alarm raising.

2.1 Existing Problem

Whilst literature on DDS mostly agrees on areas such as the risks and issues associated with DDS performance, there are other areas where sources offer differing points of view, for example, DDS and their co-existence with lifeguards. There is debate around whether DDS can be helpful or harmful towards lifeguarding practices and how DDS may change the landscape of traditional lifeguarding, as well as some disagreement on whether they serve as justification for reducing lifeguard numbers. The term ‘blended lifeguarding’ or ‘modern lifeguarding’ has been newly coined to describe the concept of traditional lifeguarding practices being blended with technology for drowning detection (Swimming Pool Scene, 2017).

Currently, there is little qualitative or quantitative research analysing the experiences of lifeguards themselves relating to this concept.

2.3 PROBLEM STATEMENT DEFINITION

1. Swimming is one of the best exercises that helps people to reduce stress in this urban lifestyle. Swimming pools are found larger in number in hotels.

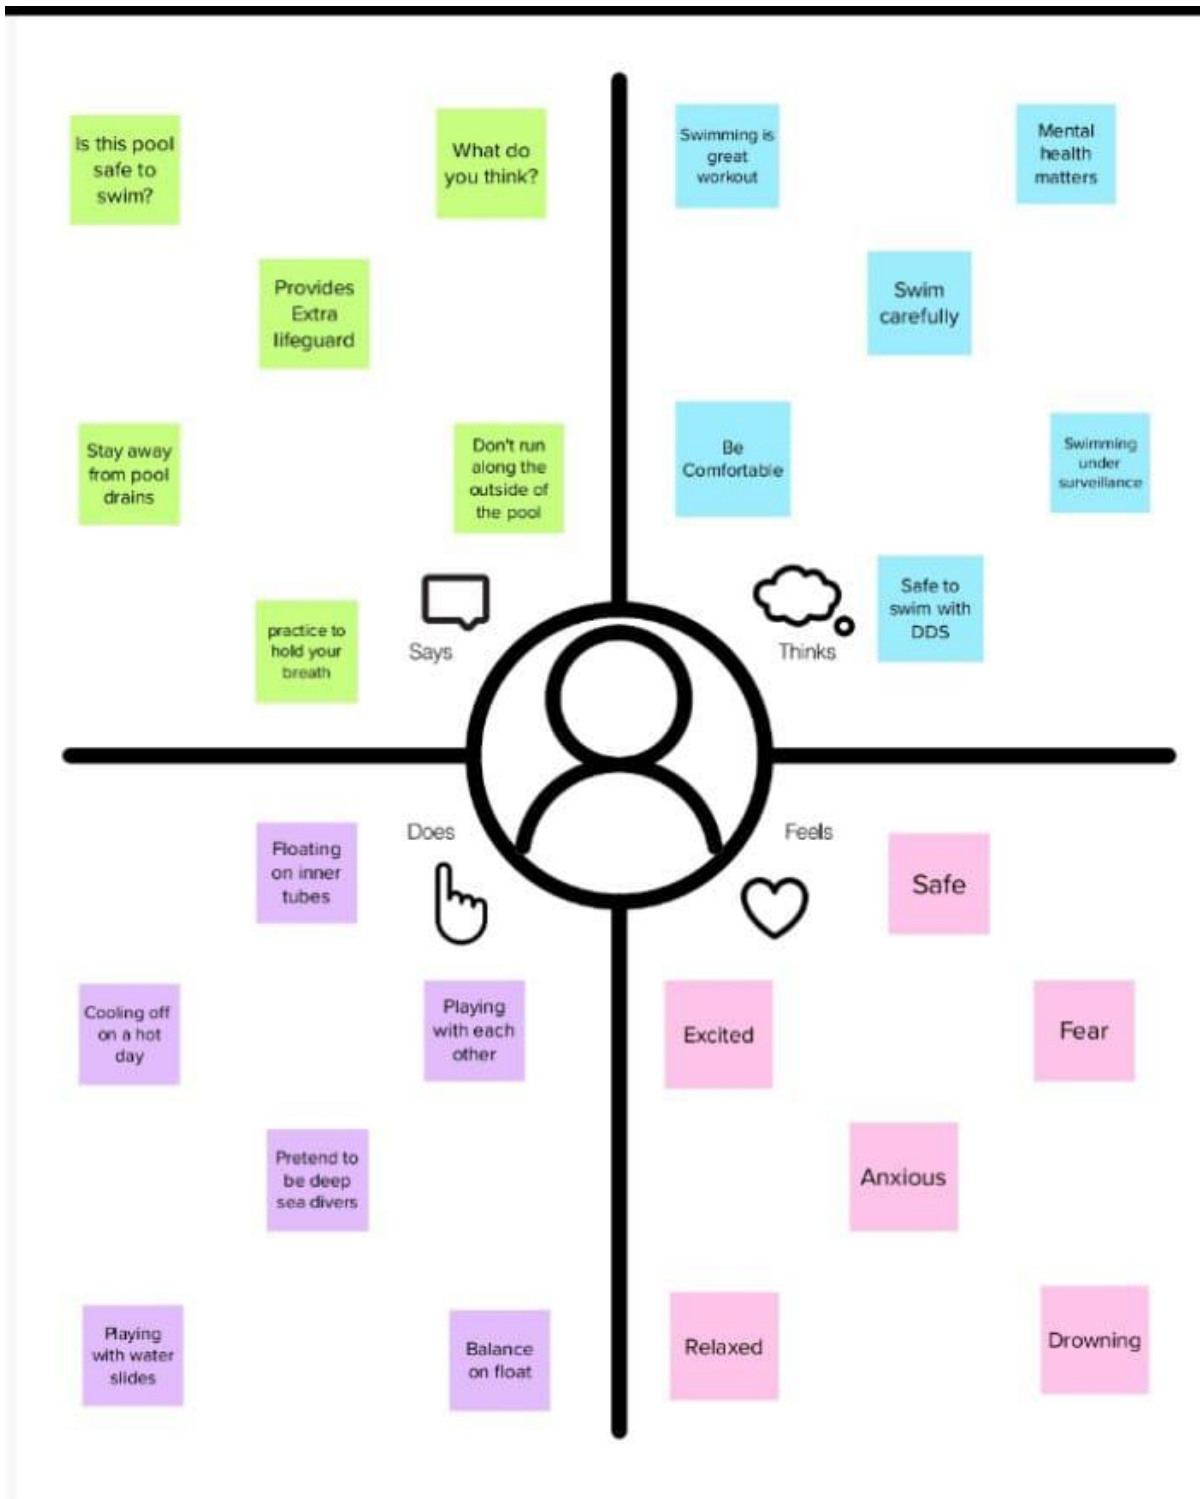

2. Applying the CNN algorithm to the dataset. Beginners, especially, often feel it difficult to breathe underwater which causes breathing trouble which in turn causes a drowning accident.

3. To overcome this conflict, a meticulous system is to be implemented along the swimming pools to save human life.

CHAPTER-3

3.IDEATION & PROPOSED SOLUTION

3.1 EMPATHY MAP CANVAS

3.2 IDEATION & BRAINSTORMING

VIRTUAL EYE DETECTION

Before you collaborate

At the start of your session, you may want to discuss the purpose of your session and the goals you want to achieve.

[Click here](#)

Define your problem statement

Write down a clear and concise statement of the problem you are trying to solve. This will help you to focus your ideas and ensure that you are all working towards the same goal.

[Click here](#)

Brainstorm

Write down all the ideas you can think of, no matter how silly or impractical they may seem. The more ideas you have, the more likely you are to find a solution.

[Click here](#)

Group ideas

Take time to discuss your ideas with your group. This will help you to refine your ideas and ensure that you are all working towards the same goal.

[Click here](#)

Prioritize

Rank your ideas based on their feasibility and potential impact. This will help you to focus on the most promising ideas and ensure that you are all working towards the same goal.

[Click here](#)

After you collaborate

Take time to reflect on your session and discuss what you have learned. This will help you to improve your collaboration skills and ensure that you are all working towards the same goal.

[Click here](#)

Brainstorm & idea prioritization

In this session we aim to achieve a good base for beginning our project. With a clear understanding of the task in hand, the next step is to brainstorm ideas and then prioritize them. This will help us to focus on the most promising ideas and ensure that we are all working towards the same goal.

Ground Rules

- Be Creative
- Rule out every possible idea and improvements
- Make your points clear and purposeful
- Don't hesitate, every point is interesting
- Agreements are good & let others benefit
- Formulate a consensus towards the problem

Brainstorming process

1. Define the problem
2. Brainstorm ideas
3. Prioritize ideas
4. Develop a solution

Brainstorming process

1. Define the problem
2. Brainstorm ideas
3. Prioritize ideas
4. Develop a solution

Brainstorming process

1. Define the problem
2. Brainstorm ideas
3. Prioritize ideas
4. Develop a solution

Brainstorming process

1. Define the problem
2. Brainstorm ideas
3. Prioritize ideas
4. Develop a solution

Brainstorming process

1. Define the problem
2. Brainstorm ideas
3. Prioritize ideas
4. Develop a solution

3.3 PROPOSED SOLUTION

Proposed Solution Template:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	People use the swimming for enjoyment, health Exercise but for all age of the people pool is really dangerous we need lifeguard, in duty swimming pools are very dangerous in the underwater.
2.	Idea / Solution description	In this project, using Artificial intelligence technology, using the camera help we can detect the people action and positions and also we check breathing level of the people inside the underwater and use of any alarms system we can detect the some of them are in the problem

3.	Novelty / Uniqueness	The uniqueness of the our system is track the people position and body condition in the drowning using YOLO Algorithm. It is fast and very speed in the detection
4.	Social Impact / Customer Satisfaction	In world most of them are unexcepted cause very serious death in the underwater not only in the city but most occurs in the rural area in the public places (well, lakes) we should avoid the accident in the underwater drowning
5.	Business Model (Revenue Model)	In the software field this well increase good income. Safety innovation in the swimming related issues this makes attractive for end users to use our software product
6.	Scalability of the Solution	IBM cloud server will collect all the data and stored in the server. This will more safe and secure

3.4 PROBLEM SOLUTION FIT

Project Title: VirtualEye - Life Guard for Swimming Pools to Detect Active Drowning

Project Design Phase-I - Solution Fit

Team ID: PNT2022T MID38060

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) Who is your customer? Children who love to play in the swimming pool and the lifeguards.	6. CUSTOMER CONSTRAINTS What constraints prevent your customers from taking action on their own? (constraints of solutions) Devices like underwater cameras and buoys for monitoring methods. By installing more underwater cameras and buoys, lifeguards can improve the system.	5. AVAILABLE SOLUTIONS Which solution is available to the customers when they face the problem? In need to get the job done? What have they tried at the point? What pain it comes to these solutions have? There are two types of drowning prevention, first is installing cameras which intended to keep a person above water in the water and second the alarm when a person is drowning in the water by detecting their status. Another one is a well known lifeguard. The main responsibility of a lifeguard is to prevent drowning and other injuries from swimming. The pros of this is installation and the alarm system is to reduce drowning and secure pool safety effectively. The main disadvantage is its much requiring maintaining always.	Explore AS, differentiate
Focus on JBP, fit into BE, understand RC	2. JOBS-TO-BE-DONE / PROBLEMS Which jobs to be done (or problems) do you address for your customers? There could be more than one, explore different sides. There are lots of drowning happening now a days. There is no proper monitoring systems at lifeguards are there in the swimming pools which causes many people and children under age of 1 is drowning in the water.	9. PROBLEM ROOT CAUSE What is the real reason that this problem exists? What is the basic story behind the need to do this job? i.e. customers have to do it because of the change in regulations. Drowning occurs in many situations like being heavily scared or being confused, children entering in the deeper side of the pool by accident, pulling into each other and so on. Lifeguards and the kids parents should be more aware of it.	7. BEHAVIOUR What does your customer do to address the problem and get the job? (If directly related) And the right value gained includes: cognitive usage and benefits, indirectly associated customers spend less time on understanding work (i.e. Emergency). Lifeguards tend to monitor the swimmers and identify the drowning person and the movements of the particular person is identified using the drowning detection system. People will be more aware of drowning and will be more careful when someone drowns. They will inform the lifeguard about the incident and will complete the management of the swimming pool. They will create awareness for their friends and families. People will calculate the benefit of drowning detection system.	Focus on JBP, fit into BE, understand RC
Identify strong TR & EM	3. TRIGGERS What triggers customers to do? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. People get triggered by seeing a not well known about drowning detection system and the lifeguards who are not so well trained to control these activities. 4. EMOTIONS: BEFORE / AFTER How do customers feel when they face a problem or a job and afterwards? i.e. fear, nervous + confident, in control - lost in your communication strategy & design. Before people feel afraid, feel hard to handle, lost control and nervous which leads to drowning. After a life guard system is proposed, people are positive and confident.	10. YOUR SOLUTION If you are working on an existing business, refine design your current solution first, fit in the canvas, and check how much it fits model. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits with the customer feedback, solves a problem and makes a customer behaviour. As VirtualEye is lifeguard drowning detection system, it is possible to extract and store not only the video but also the pool in it. If a child goes in it will be helpful to identify the reason behind the drowning. It can generate revenue from the public and lifeguard and a collaboration with lifeguard, police and other swimming pool authorities. A camera public is to detect not a close away Deep Learning.	8. CHANNELS of BEHAVIOUR 8.1 ONLINE What kind of actions do customers take online? Research online channels from IT. People/Customer will post the video to social media and create an awareness among the public and tell the ways to avoid drowning. They will research about the Drowning Detection System. 8.2 OFFLINE What kind of actions do customers take offline? Expects offline channels from IT and use them for customer development. People/Customer will be more cautious and follow the swimming pool at the right place and alert the lifeguard to prevent the accident from happening again.	Identify strong TR & EM

CHAPTER-4

4. REQUIREMENT ANALYSIS

4.1 FUNCTIONAL REQUIREMENT

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Installation	Install the camera inside the underwater, connect necessary app in the phone or other device
FR-2	Detection	Near swimming pool area use detection room for monitor or use IBM cloud for storage purpose of the details
FR-3	Audio	Give the alert signal for the people enter into the underwater and leaving into underwater
FR-4	Support	Extra support from the lifeguard if any person pulse rate will decrease inside the water
FR-5	Prior alert	Extreme level problem should be occur give the alert signal for the entire pool

4.2 NON-FUNCTIONAL REQUIREMENT

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	A Lifeguard should be present in all the time near pool
NFR-2	Security	Alert message or signal should be give by the lifeguard of swimmer
NFR-3	Reliability	Triggers if any immediate needs of the swimmer inside the pool
NFR-4	Performance	If any unwanted position changes and the pulse rate will decrease this will detect it.
NFR-5	Availability	Equipment and other requirement should be checked by the lifeguards
NFR-6	Scalability	Virtual eye lifeguard detects potential drownings and it should be notifies you.

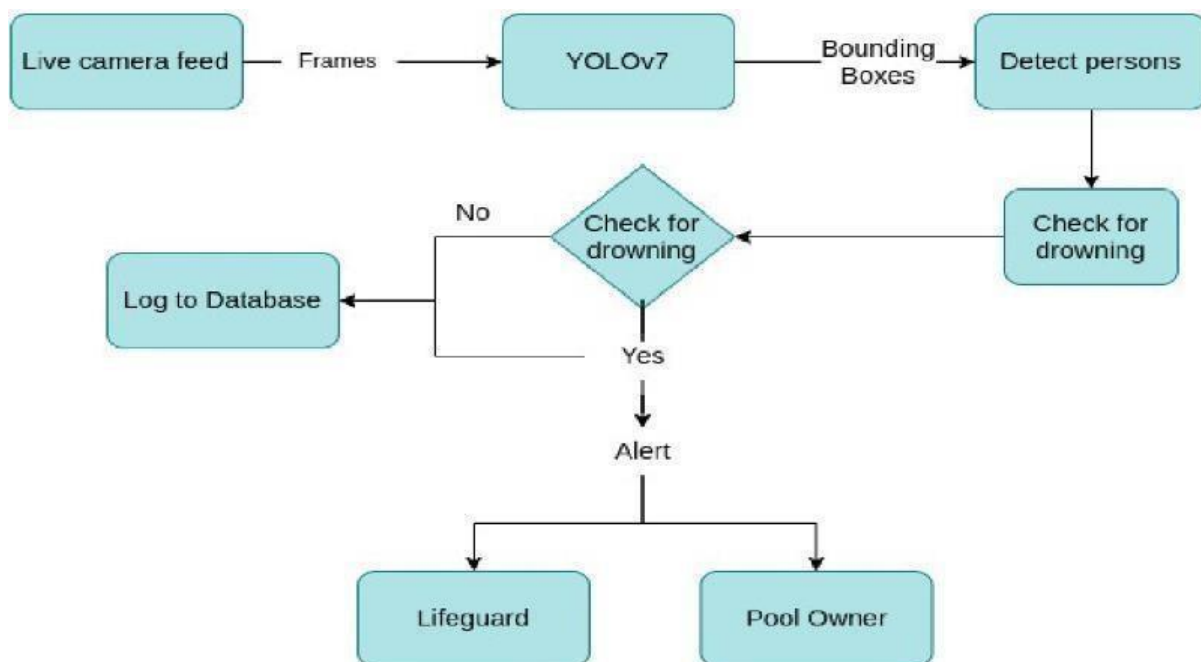

CHAPTER-5

5. PROJECT DESIGN

5.1 DATAFLOW DIAGRAMS

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored

5.2 SOLUTION & TECHNICAL ARCHITECTURE

Solution Architecture:

- ❖ To find underwater movement while person is drowning, they have any problem or anything else, we will find the solution using the Artificial Intelligence (AI) detection technology.
- ❖ Usually, such systems can be developed by installing more than 16 cameras underwater and ceiling and analyzing the video feeds to detect any anomalies. As a POC, we make use of one camera that streams the video underwater and analyses the position of swimmers to assess the probability of drowning; if it is higher, then an alert will be generated to attract lifeguards' attention.

5.3 USER STORIES

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Pool owner)	Installation	VIR-1	Install the camera inside the underwater, connect necessary app in the phone or other device	I can cameras to the IBM cloud DB	High	Sprint-1
Customer (Lifeguard)	Secure thepeople	VIR-2	As a user, I can secure the drowning personsfrom the pool	I can save the drowning person	High	Sprint-1
Customer (swimmers)	safety	VIR-3	As a user, I can swim inside the underwater without fear of the Drowning	I can swim safely	medium	Sprint-2
Customer care (Executive)	Contact	VIR-4	As a user, I Can resolve if any problem occurs with any device technically	I can contact the customer care executiveto resolve any issues	Medium	Sprint-3
Administrator	Dashboard	VIR-5	Management of the drowning detection systemand database management	I can access the system's logs and any other data instantly	High	Sprint-4

CHAPTER-6

6.1 SPRINT PLANNING & ESTIMATION

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date(Actual)
Sprint-1	8	6 Days	24 Oct 2022	29 Oct 2022	6	29 Oct 2022
Sprint-2	14	6 Days	31 Oct 2022	05 Nov 2022	12	05 Nov 2022
Sprint-3	16	6 Days	07 Nov 2022	12 Nov 2022	11	12 Nov 2022
Sprint-4	12	6 Days	14 Nov 2022	19 Nov 2022	12	19 Nov 2022

6.2 SPRINT DELIVERY SCHEDULE

https://github.com/18M-ETBU/18M-Project-242-1839044/39/D100/main/Project%20Planning%20Phase/Milestone%20and%20Activity%20List.pdf

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

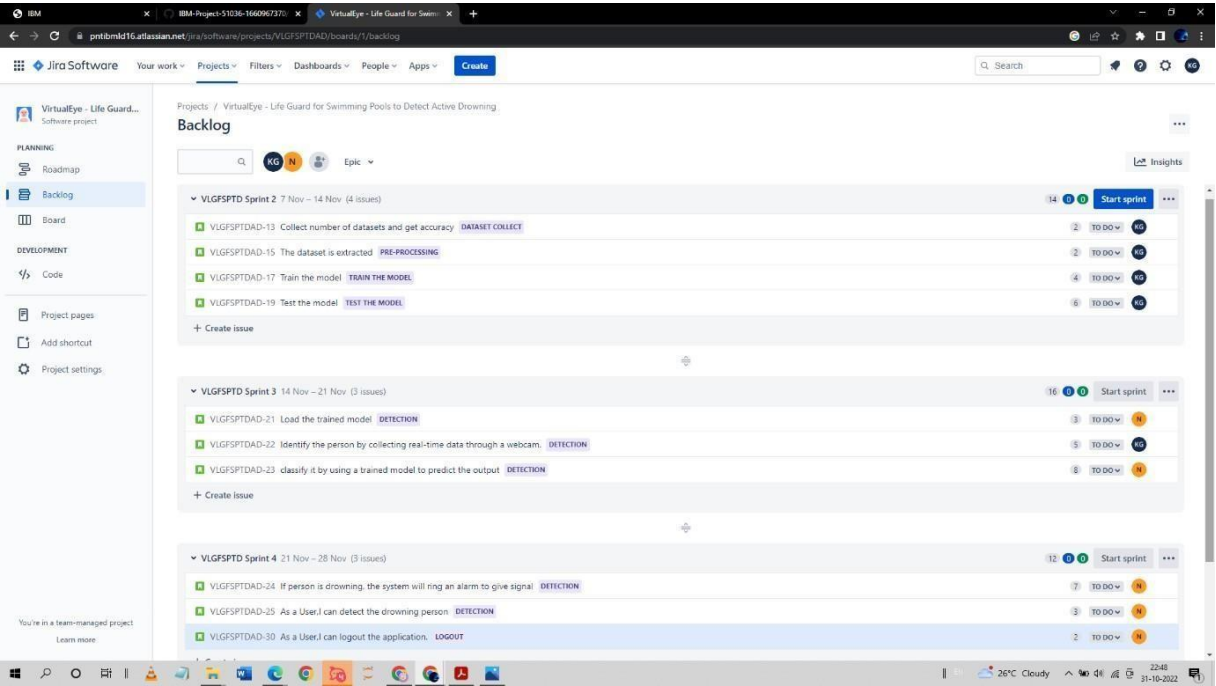

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	VIR-11	As a user, I can register for the application by entering my email, password, and confirming my password.	2	High	Revathi.S
Sprint-1	Registration	VIR-11	As a user, I will receive confirmation email once I have registered for the application	2	High	Roshni.M
Sprint-1	Registration	VIR-11	As a user, I can register for the application through Facebook	1	Low	Sowmiya.C
Sprint-1	Registration	VIR-11	As a user, I can register for the application through Gmail	2	Medium	Ponduri Sri Sus hma
Sprint-1	Login	VIR-12	As a user, I can log into the application by entering email & password	3	High	Roshni.M
Sprint-2	Dataset Collect	VIR-13	Collect number of datasets and get accuracy	2	Medium	Revathi.S
Sprint-2	Pre-processing	VIR-14	The dataset is extracted	3	High	Sowmiya.C
Sprint-2	Train the model	VIR-15	Train the model.	4	High	Revathi.S

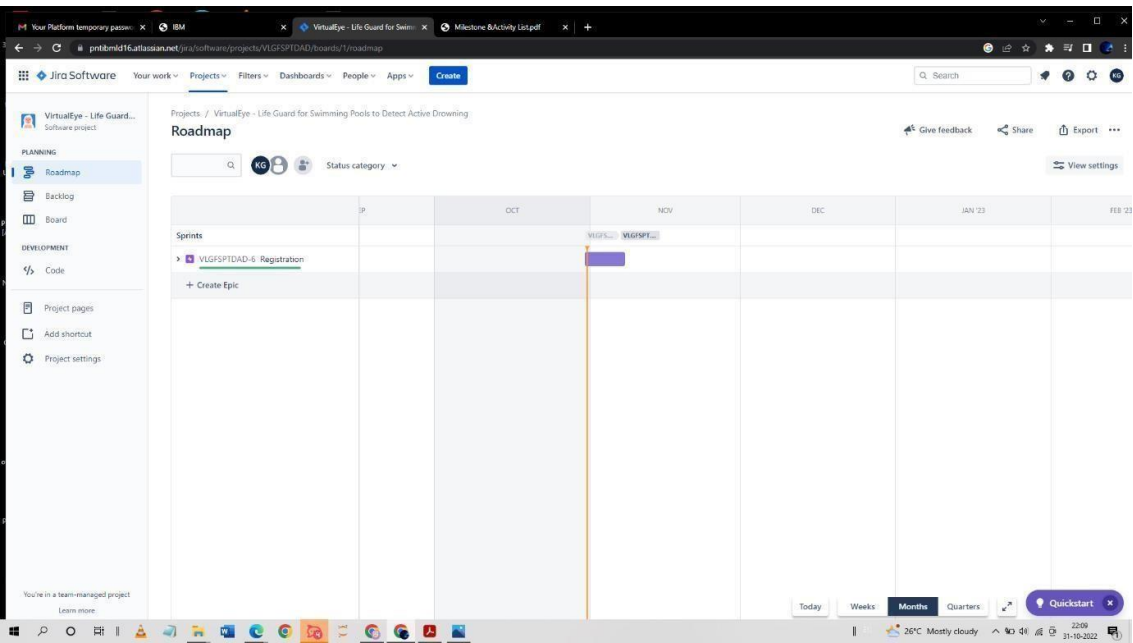

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-2	Test the model	VIR-16	Test the model	6	High	Ponduri Sri Sus hma
Sprint-3	Detection	VIR-17	Load the trained model.	4	High	Roshni.M
Sprint-3	Detection	VIR-18	Identify the person by collecting real-time data through a webcam.	3	Medium	Revathi.S
Sprint-3	Detection	VIR-19	classify it by using a trained model to predict the output	8	High	Sowmiya.C
Sprint-4	Detection	VIR-18	If person is drowning, the system will ring an alarm to give signal	7	High	Ponduri Sri Sus hma
Sprint-4	Detection	VIR-19	As a User,I can detect the drowning person.	3	Medium	Revathi.S
Sprint-4	Logout	VIR-20	As a User,I can logout the application.	2	Low	Roshni M

8. TESTING

8.1 TEST CASES

Test case ID	Feature Type		Test Scenario	Steps TO Execute	Test	Expected Result	Actual Result
LoginPage_TC_001	Functional	Home Page	Verify user is able to see the Login/Signup popup when user clicked on My account button	1.Enter URL and click go 2.Click on My Account dropdown button 3.Verify login/Signup popup displayed or not	Login.html	Login/Signup popup should display	Working as
LoginPage_TC_002		Home Page	Verify the UI elements in Login/Signup popup	1.Enter URL and click go 2.Click on My Account dropdown 3.Verify login/Signup popup with below UI elements: a.email text box b.password text box c. Login button d.New customer? Create account link e. Last password? Recovery password link	Login.html	Application should show below elements: a.email text box b.password text box c.Login button with orange colour d. New customer? Create account link e.Last password? Recovery password link	Working as expected
LoginPage_TC_003	Functional	Home page	Verify user is able to log into application with Valid credentials	1.Enter URL and click go 2.Click on My Account dropdown 3.Enter Valid username/email in Email text 4.Enter valid password in password text box 5. Click On in button	Username:lax@gmail password: lax26	User should navigate to prediction homepage	working as
LoginPage_TC_004	Functional	Login page	Verify user is able to log into application with Invalid credentials	1. Enter URL and click go 2.Click on My Account dropdown button 3.Enter Invalid username/email in Email text box 4.Enter valid password in password text box 5.Click on in button	Username:lax password:lax26	Application should show 'Incorrect email or password ' validation message.	working as
LoginPage_TC_004	Functional	Login page	Verify user is able to log into application with Invalid credentials	1-Enter URL and click go 2.Click On My Account dropdown 3.Enter Valid username/email in Email text box 4.Enter Invalid password in password text box 5.Click on in button	username:lax26@mail password:lax26	Application should show 'Incorrect email or password ' validation message.	working as
LoginPage_TC_005	Functional	Login page	Verify user is able to into application with Invalid credentials	1.Enter URL and click go 2.Click on My Account dropdown 3.Enter Invalid username/email in Email text box 4. Enter Invalid password in password text box 5. Click on in button	username:lax26@mail password:1803	Application should show 'Incorrect email or password ' validation message.	working as
Predictionpage_TC_006	Functional	Prediction Page	Page should display whether the person is drowning or not	1. Camera should take pictures of people swimming in pools 2. It should predict the probability of drowning 3. It should show a bounding box displaying the probability Of drowning	image Of people drowning	generate a alert to lifeguard if people are drowning	Working as

8.2 USER ACCEPTANCE TESTING

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the [ProductName] project at the time of the release to User Acceptance Testing (UAT).

2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	7	3	1	2	13
Duplicate	1	0	2	0	3
External	2	3	0	1	6
Fixed	10	2	4	10	26
Not Reproduced	0	0	1	0	1
Skipped	0	0	1	1	2
Won't Fix	0	5	2	1	8
Totals	24	14	13	26	77

Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	7	0	0	7
Client Application	1	0	0	41
Security	42	0	0	42
Outsource Shipping	3	0	0	3
Exception Reporting	9	0	0	9
Final Report Output	4	0	0	4
Version Control	2	0	0	2

<h2>Problem:</h2>

<p>

Swimming is one of the best exercises that helps people to reduce stress in this urban lifestyle. Swimming pools are found larger in number in the hotels, weekend tourist spots and barely people have in their house backyard. Beginners, especially often feel it difficult to breathe under water and causes breathing trouble which in turn cause a drowning accident. Worldwide, drowning produces a higher rate of mortality without causing injury to children. Children under six of their age are found to be suffering the highest drowning mortality rates worldwide..Such kinds of deaths account for the third cause of unplanned death globally, with about 1.2 million cases yearly.

</p>

</div>

<div class="left">

<h2>Solution:</h2>

<p>

To overcome the conflict, a meticulous system is to be implemented along the swimming pools to save the human life. By studying body movement patterns and connecting cameras to an artificial intelligence (AI) system we can devise an underwater pool safety system that reduces the risk of drowning. Usually such systems can be developed by installing more than 16 cameras underwater and ceiling and analysing the video feeds to detect any anomalies . but AS a POC we make use of one camera that streams the video underwater and analyses the position of

swimmers to assess the probability of drowning ,if it is higher thanan alert will be generated to attract lifeguards attention.

</p>

</div>

</div>

<div class="bottom">

<p >

Note : The system is not designed to replace a lifeguard or other human monitor, but to act as an additional tool. It helpsthe lifeguard to detect the underwater situation where they canâ€™t easily observe.

</p>

Virtual Eye

Virtual Eye- Life Guard for Swimming Pools to Detect Active Drowning

Swimming is one of the best exercises that helps people to reduce stress in this urban lifestyle. Swimming pools are found larger in number in the hotels, weekend tourist spots and barely people have in their house backyard. Beginners, especially often feel it difficult to breathe under water and causes breathing trouble which in turn cause a drowning accident. Worldwide, drowning produces a higher rate of mortality without causing injury to children. Children under six of their age are found to be suffering the highest drowning mortality rates worldwide. Such kinds of deaths account for the third cause of unplanned death globally, with about 1.2 million cases yearly.

Virtual Eye- Life Guard for Swimming Pools to Detect Active Drowning

Swimming is one of the best exercises that helps people to reduce stress in the urban lifestyle. Swimming pools are found larger in number in the hotels, weekend tourist spots and barely people have in their house backyard. Beginners, especially often feel it difficult to breathe under water and causes breathing trouble which in turn cause a drowning accident. Worldwide, drowning produces a higher rate of mortality without causing injury to children. Children under six of their age are found to be suffering the highest drowning mortality rates worldwide. Such kinds of deaths account for the third cause of unplanned death globally, with about 1.2 million cases yearly.

CHAPTER-10

10. ADVANTAGES & DISADVANTAGES

***ADVANTAGES:**

- (i) user feel comfortable and more secure
- (ii) Children, adult, pet animal , old age people are used
- (iii) spending more time for family, freedom for safety guards near the Swimming pool
- (iv) Swimmers, resort are gain in the financial
- (v) drowning should be monitored

***DISADVANTAGE:**

- (i) For uneducated people will suffer from this technology
- (ii) Electricity will be required
- (iii) Software and hardware requirement will need

CHAPTER-11

11. CONCLUSION

This section will draw from three core documents: ISO_20380, HSG179, and the recently published German guideline, DGfdB R 94.15. A summary of each is given, outlining the key messages they disseminate and what this means for those involved with DDS.

ISO_20380 This document focuses on the requirements for the installation, operation, maintenance and performance of DDS, the testing methods, and the information required from the supplier in the operating manual. These international standards do not apply to systems used in domestic pools or pools smaller than 150m².

Prior to the installation of any DDS, ‘a technical study shall be carried out by the supplier in consultation with or based on information provided by the swimming pool’s owner/operator’. This is to establish the quantity and positioning of the equipment making up the system such as cameras, central processing unit, alarm tools, and other related equipment. The technical study must also provide a technical drawing of the pool basin, showing areas of ‘coverage’ and ‘non-coverage’, as well as the minimum lighting levels required above and below the water surface for the DDS to operate within performance requirements. To carry out the study, a list of factors to consider are given, outlining the variables that make each pool unique such as the architecture, and alarm reception coverage area of mobile devices to be used with the system. With this information all in one document, the technical study can be used to help optimise performance of the system, and forms part of the contract between the supplier and the pool operator. The next area of the standard is the performance requirements. This outlines the requirements needed to pass the regular maintenance testing and performance requirements for normal operation. This section covers the alarm set off time for operational performance, which is to be 15 seconds or less and displayed on the system interface. It also states that the alarm set off time must be built-in and shall not be changeable by staff. The section also discusses the areas covered by the DDS and highlights that each trained staff member must be aware of these areas. Another coverage-related requirement is that the DDS must be able to temporarily create areas where detection is disabled, to manage specific activities such as rescue drills.

CHAPTER-12

FUTURE SCOPE

lifeguard system consists of three main components, i.e., the drowning detection, the rescuing drone, and the hazardous activity detection. All three components combined will create a system capable of detecting drowning victims, dispatching an inflatable tube using a drone (as depicted in Fig.9) and detecting hazardous activities—eventually becoming an entity that could assist a lifeguard. The system is accessible to its primary user, presumably a pool owner or a lifeguard, in the form of an interface with a sound alarm and an android mobile service that holds the capabilities of receiving Firebase notifications. Confined with a few of the hardware limitations, such as the use of a single camera and the Jetson Nano at the presence of better-quality hardware, could affect the speed and accuracy of the overall system is becoming a state-of-the-art.

This limitation could be omitted with the use of multiple cameras that could be placed over the premises in several ground coordinates, increasing the accuracy of the computer vision algorithms. Moreover, due to the inability to fly a drone in extreme weather conditions such as rain, strong winds or lightning, the system is limited to be used under few specifications. As swimming in extreme weather conditions is not preferred either, the system could be further improved to emit a warning signal if a person was to swim in any of the above weather conditions, bypassing the need to fly the drone. Additionally, all the processing is done on the clientside of the applications on the Jetson Nano board, preventing any security and privacy issues that might arise due to the sensitive information inputted through the cameras. For future developments convenience wise, the system could benefit by having an additional set of cameras to identify and verify a drowning or a hazardous activity on the premises. Accessibility could also be improved by extending the Android service to be an application both in Android and iOS platforms that could hold the details of each premise individually, making a centralized system that watches over the decentralized pool premises. Both drown and hazardous activity detection could be improved by gathering a night time dataset that increases the accuracy of the data in low light.
