

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	16 October 2022
Team ID	PNT2022TMID38060
Team Leader	Revathi S
Team Members	Roshni M Sowmiya C Ponduri Sri Sushma
Project Name	VirtualEye-LifeGuard for Swimming pools for Active Drowning
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Camera Installation	Cameras should be installed inside water and in the walls of the building.
FR-2	Sensor Installation	Installed under water without disturbing the people.
FR-3	Deduction	Detected by movements of the swimmer.
FR-4	Alert	Sends an alert message to the lifeguard.
FR-5	Support	Lifeguard help or swim tubes.
FR-6	Alarm	Rings alarm with drowning detected.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	When someone is drowning, the sensors detect the movements and locate the swimmer who is drowning and alert the people.
NFR-2	Security	Lifeguards will be present in the pool and the Cameras are secured by the management and are safe.
NFR-3	Reliability	The process will be a reliable multimedia video Based surveillance system.
NFR-4	Performance	When the movements of the swimmer are unusual then the alarm will be triggered.
NFR-5	Availability	Detection equipment includes safety wheel, pool hook, rescue tubes, first aid box etc.
NFR-6	Scalability	Deep learning algorithm for the drowning detection helps the lifeguard for earlier prediction with the reason behind their drowning.
